RE: Environmental Management Leadership

Dear Secretary Granholm:

The Biden administration faces a critical decision that will have far-reaching environmental justice implications: the nomination of an Assistant Secretary for Environmental Management (EM). It is critical that the person who holds this office have a deep, genuine, and effective commitment to remedying the damage done to affected communities living near the highly contaminated sites of the DOE nuclear complex.

We cannot express the dismay that would occur, however, were someone nominated who is incapable of greatly improving the years of inadequate cleanup, missed milestones, and broken cleanup promises. Big and bold action is needed from new EM leadership.

The Alliance for Nuclear Accountability (ANA) includes more than thirty grassroots organizations that live in the shadows of nuclear weapons complex facilities across the country. ANA groups represent tens of thousands of members at and near the fence lines of DOE sites. For 34 years, ANA has advocated government accountability on nuclear weapons issues, including design, production, and testing of nuclear weapons as well as management of wastes and cleanup of contaminated sites. Our 2021 report, "Safety, Security, and Savings," includes the urgent recommendation for a "comprehensive cleanup that defines success by its isolation of chemical and radioactive hazards to protect future generations." Business as usual at EM will not get the job done!

According to the Government Accountability Office High Risk Series, DOE sites have more than \$500 billion in environmental liability (about seven times more than the Department of Defense). That liability is increasing, an indication of the inadequacy of past cleanup practices. Failure to achieve genuine cleanup will cause incalculable health impacts to workers and the public - and significant long-term damage to environmental justice communities.

As one measure of the priority the Biden administration puts on public health and environmental justice, the nominee for EM-1 should be someone with a proven commitment to EJ in cleanup of DOE sites.

ANA looks forward to working with DOE, states, tribes, and others to address this very difficult, but essential, effort to bring about a cleaner, more just, future for our communities.

Sincerely,

A handwritten signature in cursive script that reads "Marylia Kelley".
